**ImTech introduces its new low cost OEM Mark605 High Resolution Inkjet Print Controller**

CORVALLIS, Ore. August 15, 2009 - Even the most demanding graphic applications fall to ImTech's newest offering; the Mark605 Inkjet Print Controller, a low cost, high speed, high resolution, and embeddable inkjet print controller supported by the dependability of Hewlett-Packard disposable print cartridges.

ImTech has introduced the Mark605 to meet the expanding needs of OEM's for faster, cleaner, low maintenance, high speed, high performance print delivery. The Mark605 is designed to fully integrate with custom applications. Expressing his excitement about the Mark605, President, Bill Buskirk stated, "*We are confident that it will become the print technology of choice as manufacturers stretch to meet ever more challenging print applications.*"

Versatility is the hallmark of the Mark605 due to its simple integration protocol. It provides access to macros; for serialization, counting, date calculations, time offsets, timestamps and others, from custom applications.

Each Mark 605 supports two ½" printheads and may be grouped together to create user defined print heights. Preconfigured print head arrays add to the ease of installation in industrial environments. The arrays eliminate power related printhead failures due to mishandling preserving uptime and increasing dependability.

The Mark605 easily meets demanding graphic applications by delivering up to 600 X 600 dpi. With its user defined input/output lines, it even allows upstream control from PLC's and signaling to external peripherals minimizing the total installation footprint of this compact powerful print controller.

*"Our quest to improve inkjet print technology compels us to continue to deliver faster, more efficient and higher performing products."* said Les Faulds, Director of Sales & Marketing.

## About ImTech, Inc.

Founded in 1998 and headquartered in Corvallis, Oregon, ImTech provides specialty inks, printing systems and related consulting and engineering services for inkjet applications. Its products are available worldwide, ranging from piezo and thermal inkjet development and characterization tools to HP industrial coders, bulk systems and inks. As an OEM inkjet partner with HP's Specialty Printing Systems Division, ImTech is licensed to fill new, original HP 45 cartridges with its own inks. The company's ink solutions include UV-curable inks for use in TIJ products, as well as application-specific and custom inks.

ImTech's engineers are recognized industry experts who were instrumental in developing thermal inkjet technology; collectively they have more than 250 years of inkjet and imaging experience and have more than 150 patent authorships. Recently, ImTech was named 48<sup>th</sup> on the 2009 Portland Business Journal's fastest growing private businesses in Oregon list.

ImTech reaches an extensive and varied market by selling its inks and products through a worldwide distribution network serving global pharmaceutical, packaging, mail processing and other industries.
